

Anish Kumar Neupane

Backend & Full-stack Engineer

+977 9869377340 | anishkn04@gmail.com | linkedin.com/in/anishkn04 | github.com/anishkn04 | Kathmandu, Nepal

SUMMARY

Backend-focused Full Stack Engineer with production experience delivering REST APIs, relational database schemas, and authentication and authorization across .NET 8/ASP.NET Core, Ruby on Rails, Node.js/Express, and PHP. Hands-on with PostgreSQL (EF Core, ActiveRecord, Sequelize), Redis, JWT and session-based auth, background job processing (Hangfire, Sidekiq), third-party API integration, and LLM provider integrations (OpenRouter, Ollama, LM Studio). Owns modules end to end: schema and API design, implementation, automated tests, migrations, deployment, and production debugging. Co-author of two peer-reviewed conference publications applying machine learning to real-world datasets.

EXPERIENCE

Associate Software Engineer

Mar 2026 - Aug 2026

Jog Chain Technology | Kathmandu

- Built the backend of a pathology laboratory management system as an ASP.NET Core 8 REST API on Clean Architecture with EF Core and PostgreSQL, modelling the investigation lifecycle: patients, samples, test panels, results, and billing.
- Designed a strictly enforced report workflow (Draft → Results Entered → Pending Verification → Verified → Finalized) with per-lab auto-verification, sex- and age-dependent reference ranges, and soft deletion so clinical history survives; enforced with FluentValidation and a Unit of Work.
- Implemented JWT auth with BCrypt hashing, refresh tokens, and role-based authorization, plus an EF Core interceptor for automatic audit history with a filtered query API; covered the domain with 144 xUnit tests against a real DbContext.
- Owned modules end to end in one engineering, product, and design loop with short cycles and release-aware review.

Software Engineering Trainee - Ruby on Rails

Nov 2025 - Jan 2026

Bajra Technologies | Kathmandu

- Designed and implemented RESTful APIs for user authentication (OmniAuth/Devise), group management, and messaging, following established API design standards.
- Engineered a full-stack Ruby on Rails application from scratch within a two-week sprint, applying MVC architecture with a focus on scalability and maintainability.
- Integrated ActiveRecord with PostgreSQL; configured Sidekiq and Redis for background job processing and Action Mailer for automated email notifications, with RSpec unit and integration tests covering API reliability.

Freelance Backend Developer

Nov 2025 - Feb 2026

Know Your Candidate | Kathmandu

- Architected and deployed a PHP/MariaDB web portal managing 3,000+ candidate profiles, optimised for hundreds of daily users at peak, achieving a 40.7% Google Search CTR and average ranking position 3.6 through SEO and frontend performance work.

PROJECTS

AI-Native Project Management - Backend Contributor

gitlab.com/team-aergia/ai-native-project-management May 2026 - Present

- Built backend services for an AI-native project management platform (.NET 8/ASP.NET Core, EF Core + PostgreSQL, Redis, MediatR/CQRS, Hangfire) with a React 19 frontend and GitLab integration for commit sync and standups.
- Implemented JWT authentication and an AI provider layer (OpenRouter, Ollama, LM Studio) with model discovery, context-window validation, and structured error surfacing; replaced keyword skill-matching with LLM judgment plus a persisted audit trail exposed via a REST endpoint.
- Hardened GitLab sync and domain logic: branch-wise pagination with SHA dedupe, UTC timestamp fixes, member attribution, cache invalidation, and an acceptance-criteria evaluator.

ActiveStudy

https://as.anishkn.com.np Jan 2026

- Built a Ruby on Rails study group platform with group messaging and a three-tier role model (member/moderator/admin) gating group settings.
- Designed the relational schema in PostgreSQL, built RESTful endpoints for group and user management, and deployed on AWS EC2 with cron-scheduled per-user activity digests via Whenever, ActiveJob, and Action Mailer.

SKILLS

Languages	Python, TypeScript, JavaScript (Node.js), Ruby, C#, Bash, PHP
Frameworks & Frontend	.NET 8 / ASP.NET Core, Ruby on Rails, Express.js, React.js, MediatR/CQRS, Hangfire, Sidekiq, Hotwire, Tailwind-CSS
Databases	PostgreSQL (EF Core, ActiveRecord, Sequelize), MariaDB, Redis, MongoDB, DynamoDB
Cloud & DevOps	AWS (EC2, Lambda, S3, DynamoDB, API Gateway), Docker, Linux, Git, CI/CD
Auth, AI & Testing	JWT, OmniAuth/Devise, BCrypt, FluentValidation, xUnit, RSpec, LLM Integration (OpenRouter, Ollama)

EDUCATION

Bachelor of Engineering - Software Engineering

Dec 2022 - Present

Nepal College of Information Technology (NCIT), Pokhara University, Kathmandu
